

Horses lose magnesium through sweat and urine. Many performance horses can become deficient as the season progresses as they are using progressively more magnesium due to stress, travel and competition. Transdermal magnesium is a highly efficient way to deliver magnesium directly to the muscle and ligaments, as it bypasses the digestive system all together and can be absorbed by soft tissues more rapidly.

Discover Magnesium Sulfate

Magnesium Sulfate (aka Epsom Salt), is becoming an increasingly common supplement for horses. Customarily it may be used in a weekly mash and to orally replace lost mineral salts or to supplement body levels. Equally effective Magnesium Sulfate can be used as a transdermal poultrice, bath brace, massage liniment or pure crystal salt bath, to aid in the restoration of valuable Magnesium Sulfate blood levels.

Crystalotions has developed a unique method of converting USP Grade Magnesium Sulfate Crystals for daily use in easy to spray and rub-on applications sold under the brand name of Dr. Milt's. Dr. Milt's Magnesium Sulfate based topical liquids, creams and gels have been carefully formulated from the highest quality, all natural, plant and mineral based ingredients. The Liquid and Cream Poultrice products, along with the Liniment Gel, are innovatively unique for the discretionary horse owners, desiring the best possible care available. Whether you ride for fun, compete in professional events, or have a stable full of thoroughbreds, expect the best healing effects and recovery results from our natural products.

Typical Dr. Milt's Ingredients: 99.9% Pure Liquid Magnesium Sulfate, Witch Hazel, Essential Oils (Moisturizer), Arnica, Peppermint Oil, Wintergreen Oil
